

# Bug Report

**Title:** User can place an order even when the cart is empty

**Severity:** High

**Environment:** Windows 10/11, Chrome (latest)

## Description:

The system allows the user to place an order even if the cart has no items in it. When the user clicks "Place Order" from an empty cart, the purchase modal opens and the order can be completed successfully. There is no validation preventing checkout with an empty cart.

## Steps to Reproduce:

1. Go to <https://demoblaze.com>
2. Do **not** add any product to the cart
3. Open the cart page
4. Click **Place Order**
5. Enter all the required information in form.
6. Click **Purchase**

**Expected Result:** The system should not allow the user to place an order when the cart is empty. A validation message like "Cart is empty" should appear.

**Actual Result:** The system allows the purchase to proceed even though the cart has no items.

**Notes:** This is a major issue for checkout flow because it creates invalid orders and breaks business logic.
