Bug Report

Title: Contact form allows submission with invalid placeholder values

Severity: High

Environment: Windows 10/11, Chrome (latest)

Environment: Contact

Description: The Contact form allows submission even when all fields are filled with invalid or placeholder data (e.g., "NA"). The alert "Thanks for the message!!" is shown regardless of input validity, indicating missing input validation.

Steps to Reproduce:

1. Go to https://demoblaze.com
2. Open the **Contact** modal by clicking on "Contact" in header.
3. Fill all fields (Contact Email, Contact Name, Message) with placeholder values like "NA"
4. Click **Send message**
5. Observe the alert popup

Expected Result: System should validate inputs: require proper email format, non-empty name and message. Display error messages if invalid.

Actual Result: Alert shows "Thanks for the message!!" even though given input values are incorrect.
